GARDENPOOL Skimmer Outdoor Pool

Top view (design representation)

GARDENPOOL Skimmer Outdoor Pool 4

The pool is accessed via a shallow water zone and an adjoining access and egress steps. The slip resistant surfaces not only provide safety, but also ensure that the water glistens in a special way. In addition, there is a tubular bench that can be used to hold a roller shutter cover (all models exclude roller shutter cover).

GARDENPOOL Skimmer Outdoor Pool 4

The longitudinal section (see image) shows the shallow water area with access and egress steps as well as the tubular bench in which a roller shutter cover can be placed (all models excl. roller shutter cover).

Longitudinal section (design representation)

Installation setup (design representation)

Installation setup of the pool (see image) from the GARDENPOOL Skimmer outdoor pool series.

The surrounding pool wall insulation, the floor structure with separating fleece and the layers of the backfill and the surrounding area are clearly visible.

A bathing experience in just a few days

If all the necessary measures are taken, it is possible to assemble the pool within a week. Due to the sophisticated design principle of the stainless steel pools, only minor preparatory, accompanying and final construction work is necessary (e. g. excavation work, concrete work, electrical work, etc.), depending on the conditions on site.

To ensure that no questions remain unanswered during planning and execution of the project, you will receive a detailed plan document with precise information on the construction process. This provides assurance right from the start.

A stainless steel pool from Berndorf Bäderbau guarantees a shorter construction period. We will be happy to accompany you from the very beginning and advise you on how to make the dream of your own bathing experience come true.
